

Automatic pass-through disinfection

For foam cleaning and disinfection of floors in passing areas

Scope of delivery:

High/low pressure injector, non-return valve for chemicals, water non-return valve, time control, electric control according to VDE, manual push button, nozzle beam with 2 nozzles, warning light for people's passing area (optional)

Advantages:

- / Disinfection of rolls and shoes in the passing area
- / Prevention of cross-contamination between the work areas
- / Highest protection through interval-controlled and automatic foam application
- / Warning light for people's passing area
- / Easy manual operation
- / Operating light green/red
- / Operation in all stationary pressure systems

Function:

The foam disinfection system with the approved injector system automatically sprays a foam carpet on the floor after a certain time interval. This carpet unfolds its disinfecting effect and thus prevents cross-contamination by rolls or shoes between the work areas.,

Suitable for connection to pressure cleaning systems between 15 and 100 bars.

- 1 Compressed air inlet
- 2 Fluid inlet
- 3 Program selector switch
- 4 Fluid outlet
- 5 Chemicals with suction hose
- 6 Power supply
